Orlando, FL 32812

# DESIGN CRITERIA PRESUMPTION REBUTTED!

This section provides an analysis of potential modifications to existing stormwater design criteria within the State of Florida to meet the performance objectives outlined in the Water Resource Implementation Rule (Chapter 62-40 FAC). This rule requires that stormwater management systems achieve at least an 80% reduction of the average annual load of pollutants that would cause or contribute to violations of State water quality standards. If the stormwater management system discharges to a designated OFW or other protected waterbody, the performance criteria increases to a 95% reduction. Based on the analyses presented in Section 5.2, with the exception of the SMRWMD design criteria for on-line dry retention, existing stormwater design criteria fail to consistently meet either the 80% or 95% target goals outlined in Chapter 62-40.

# UNIFIED STORMWATER RULE CONCEPTS

- Increase nutrient load removal
- **Clear language on impaired waters requirements**
- BMP treatment train load reduction credits
- **Credits for nonstructural and LID BMPs**
  - ✓ Preserving vegetation, minimize clearing
  - ✓ Green roof/cistern systems
  - ✓ Pervious concrete
  - ✓ Florida Friendly Landscaping
  - ✓ Disconnect impervious areas
- Redevelopment section
- Compensating treatment (WQ Banking)
- Retrofit section

# WHEN ARE HIGHER LEVELS OF STORMWATER TREATMENT REQUIRED?

## Discharges to OFWs

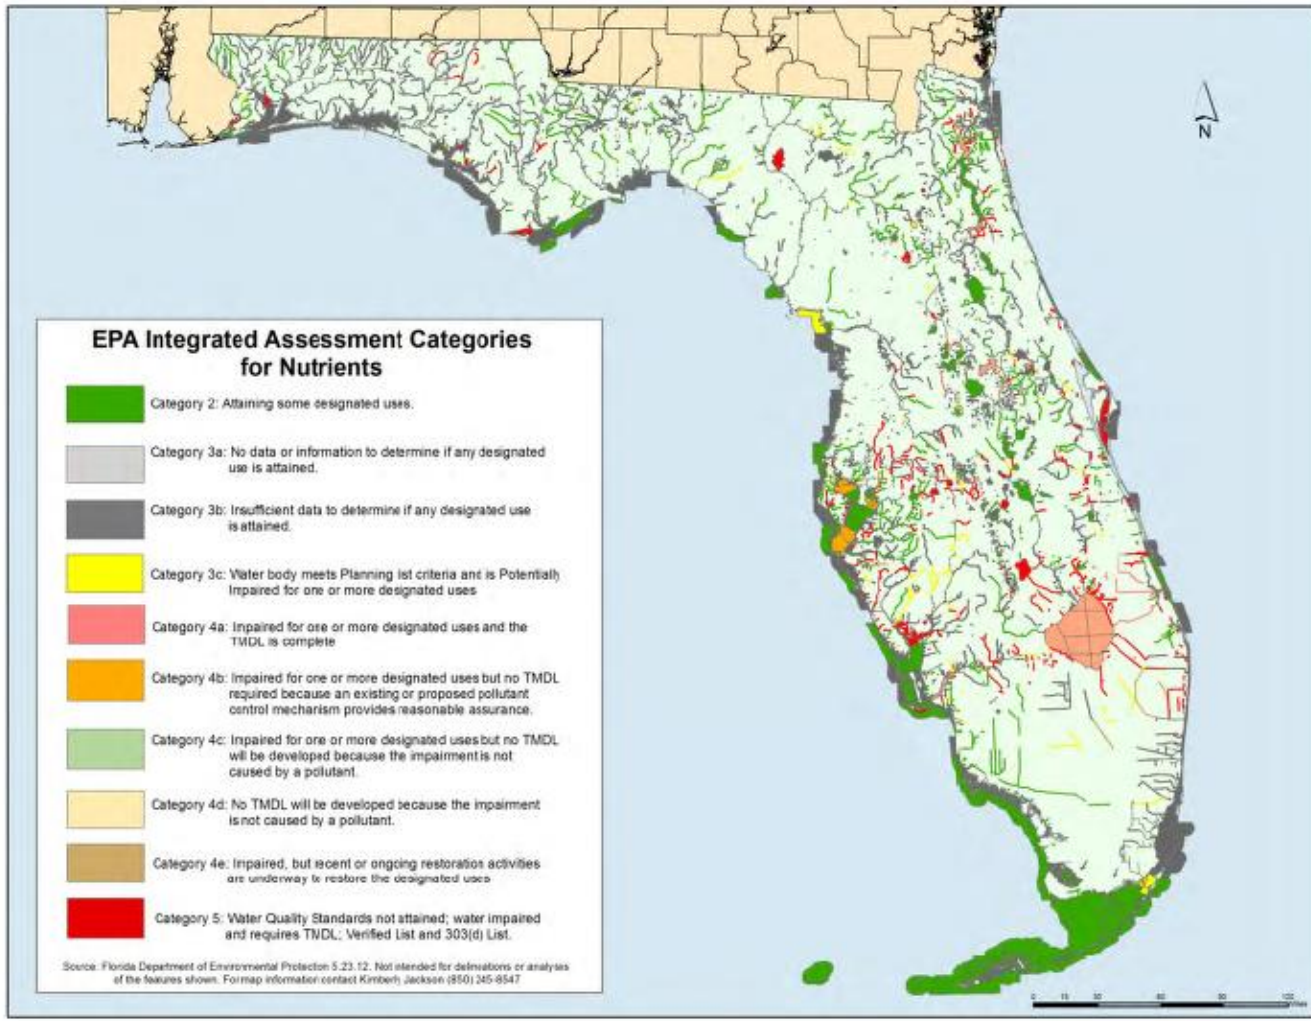

- Must meet “antidegradation” standard
- Presumptive = 95% load reduction

## Discharges to Impaired Waters

- Must meet “net improvement” standard
- Must demonstrate load reduction achieved

# IMPAIRED WATERS IN FLORIDA

- 2,776 spreadsheet lines of water bodies in cumulative FDEP 303(d) list!
- Most common impairments are nutrients, DO and fecal coliforms

**Table 8.3a. Miles of Rivers/Streams Impaired by Cause**

Table. Column 1 lists the parameter assessed, Column 2 lists the number of impaired water bodies, and Column 3 lists the total miles impaired.

| Parameter Assessed                             | Number Impaired | Miles Impaired |
|--|-----------------|----------------|
| DO   | 699             | 5,975          |
| Fecal Coliform                                 | 338             | 2,685          |
| Mercury (in fish tissue)                       | 249             | 2,903          |
| Nutrients (chlorophyll <i>a</i> )              | 153             | 1,014          |
| Biology  | 36              | 320            |
| Nutrients (other than chlorophyll <i>a</i> )   | 28              | 18             |
| Iron   | 17              | 314            |
| Lead   | 14              | 123            |
| Specific Conductance                           | 10              | 111            |
| Bacteria (shellfish harvesting classification) | 10              | 82             |
| Turbidity                                      | 10              | 83             |
| Un-ionized Ammonia                             | 7               | 69             |
| TP   | 6               | 76             |
| Biochemical Oxygen Demand                      | 2               | 21             |
| Copper   | 2               | 3              |
| TDS  | 2               | 6              |
| Silver   | 1               | 6              |
| Chloride                                       | 1               | 0              |

# HOW DETERMINE IF WATER BODY IS AN OFW, IS IMPAIRED, OR HAS AN ADOPTED TMDL?

- Use **DEP's Map Direct** to determine if water body or WBID is an OFW or it's impairment and TMDL status
- Use **DEP's Map Direct** to see if project site is within the 12 unit HUC (subwatershed) of an impaired water body

**NOTE: DEP HAS REVISED MAP DIRECT. HOW TO IS FOR REVISED SYSTEM**

- Use **DEP's TMDL Tracker** system to see if a TMDL is adopted, or check 62-304, F.A.C.
- Use **EPA's Ask Waters** system

# DEP MAP DIRECT SYSTEM

The [Florida Department of Environmental Protection](#), the lead agency for environmental management and stewardship, is one of the more diverse agencies in state government - protecting our air, water and land. DEP is divided into three primary areas: Regulatory Programs, Land and Recreation, and Water Policy and Ecosystem Restoration. Florida's environmental priorities include:

- \* Developing a consistent and effective regulatory process
- \* Ensuring the quality and quantity of our state's water resources
- \* Increasing the access to our award-winning state parks

This  
Map

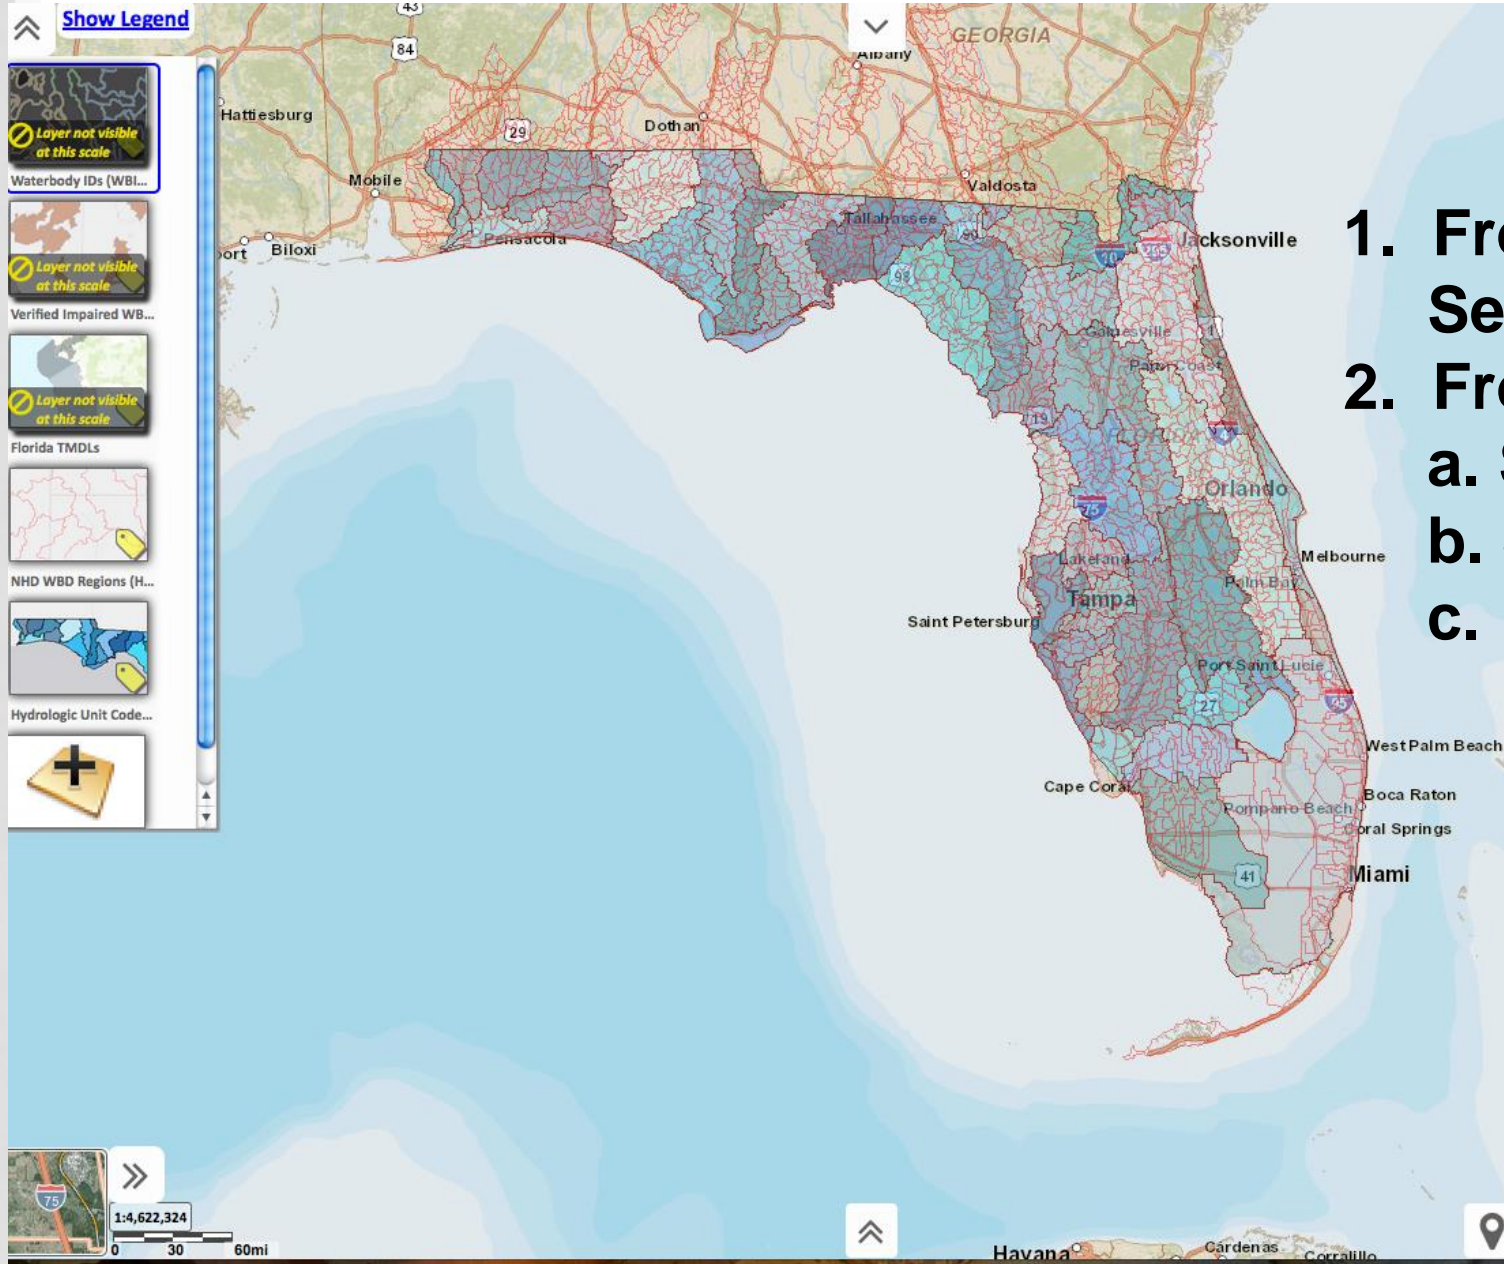

# SELECT BASEMAP AND DATA LAYERS

1. Select Basemap from options at arrow in left bottom of map
2. Open Data Layers by clicking on arrow at upper left of map, and then on + More Data

# MAP DIRECT - SELECT DATA LAYERS

1. From NHD Data Layer  
Select HUC 12 sub-watershed
2. From Watershed Assessment
  - a. Select Verified Impaired WBIDs
  - b. Select Florida TMDLs
  - c. Select WBIDs

# MAP DIRECT – ENTER ADDRESS, WQ RESULTS

The screenshot displays the Map Direct web application interface. On the left, there is a vertical sidebar with a 'Show Legend' button and several map layers: Waterbody IDs (WBIDs), Verified Impaired WBIDs, Florida TMDLs, NHD WBD Regions (HUCs), and Hydrologic Unit Code (HUC). The main map area shows a grid of streets including Billiar Ave, NW Doreen St, NW Friar St, NW Prima Vista Blvd, SW Buswell Ave, SW Butler Ave, and SW Violet Ave. A blue location pin is placed on the map. In the upper right corner, a search box contains the address '27.31722038 x -80.36570686' and '27°19'1.9934" x -80°21'56.5447"'. Below the search box are buttons for 'Drop Marker' and 'What's nearby?'. Further down are buttons for 'Zoom To All 8 selected features', 'Clear Results', 'Printable View', and 'Table'. The results panel on the right is titled 'Waterbody IDs (WBIDs)' and lists the following information: ST LUCIE RIVER (NORTH FORK), WBID# 3194, Parent WBID# 3194, This is a Class 3M ESTUARY, North St. Lucie Group 2, St. Lucie - Loxahatchee, HUC# 03090202, Southeast Regulatory District, and Changes: Waterbody Name revised, Run 34. Below this is a section for 'Verified Impaired WBIDs' which lists: St Lucie River (North Fork), Assessed as WBID# 3194 (WBID at the time of the assessment), Current WBID# 3194 (WBID as it may exist after possible edits to the WBID data layer), Office of General Counsel Case# 09-1726, Mercury (in fish tissue) (Parameter for which the waterbody was assessed to obtain verified listing), and Mercury (based on fish consumption advisory). At the bottom of the interface, there is a scale bar showing 1:2,256, a 'Show County' dropdown menu, and a standard map navigation toolbar.

1. Be sure desired data layers are turned “on”
2. Enter address into search box in upper right hand corner
3. Results for each data layer will be shown

# EPA ASK WATERS WEB SITE

[http://iaspub.epa.gov/apex/waters/f?p=ASKWATERS: MAIN\\_MENU](http://iaspub.epa.gov/apex/waters/f?p=ASKWATERS: MAIN_MENU)

The screenshot shows the EPA Ask Waters website. At the top left is the EPA logo and the text "United States Environmental Protection Agency". To the right are links for "Advanced Search" and "A-Z Index". Below this is a navigation bar with tabs for "LEARN THE ISSUES", "SCIENCE & TECHNOLOGY", "LAWS & REGULATIONS", and "ABOUT EPA". A search bar is located to the right of these tabs. The main content area is titled "AskWATERS" and includes a breadcrumb trail: "You are here: EPA Home » WATERS » AskWATERS". There are "Contact Us" and "Share" links. A large "ASK WATERS" logo is displayed, followed by the text: "Welcome to Ask WATERS, the Query Tool for Water! Ask WATERS answers multi-program questions that draw on information from the databases linked through WATERS. This tool generates cross-program calculations, examines spatial relationships between programs, performs nationwide analyses, produces multi-program inventory reports for a given geographic area, and investigates interstate water quality issues." Below this, it states "Ask WATERS contains two different types of queries:" and describes "Simple Query" and "Expert Query". A footer section contains links for "EPA Home", "Privacy and Security Notice", and "Contact Us", along with icons for "News by E-mail", "EPA Mobile", "Widgets", "News Feeds", and "Podcasts", and the EPA seal.

## Use the Expert Query Tool

# DEP TMDL TRACKER WEB SITE

<http://www.dep.state.fl.us/water/watersheds/assessment/tmdl-tracker.htm>

## Watershed Assessment

### TMDL Tracker

Release 2.0 of the [TMDL Tracker web application](#) is now available through the [FDEP Business Portal](#). With this release easy access to watershed assessment and TMDL information from Florida's Department of Environmental Protection is now provided to the public through the internet.

Use this web application's **TMDL Reports** and **Dashboards** to access **TMDL status**, **Assessment**, and **Permit information**.

You may also be able to determine if a WBID is **impaired**. Click on this link to [get easy to follow instructions on how to access this information](#).

- » The **TMDL Report** provides access to downloadable TMDL documents.
- » Under the **Dashboard** link, the **Water Quality Tab** provides a snapshot of **TMDL information** allowing results to be filtered by **DEP District**, **TMDL Document Status**, or **Pollutant**.
- » Under the **Dashboard** link, the **Assessment Tab** provides a snapshot of **Assessment information** allowing results to be filtered by **DEP District**, **Assessment Category**, or **Basin Group**.
- » Also under the **Dashboard** link, the **Permit Tab** allows for searches based on **Waterbody Name**, **WBID** (waterbody segment id), **Wastewater Facility ID** or **Wastewater Facility Name**.
  - » This powerful tool also provides spatial searches using latitude and longitude coordinates.
  - » Search results can be confirmed through links to the [MapDirect](#) map browser.

### [Access the TMDL Tracker Web Application](#)

Chapter 62-304, FAC

# WHY ARE HIGHER LEVELS OF STORMWATER TREATMENT REQUIRED?

## Section 402(p) of Federal Clean Water Act

- Establishes NPDES stormwater permits
- Construction permit requires treatment to meet WQS
- MS4 permit requires local governments to reduce pollutant loadings
- MS4 permit requires reducing pollutant loads to achieve TMDLs
- MS4 permit requires load tracking/reporting

# WHY ARE HIGHER LEVELS OF STORMWATER TREATMENT REQUIRED?

## SECTION 373.414(1)(b)3., Florida Statutes

3. If the applicant is unable to meet water quality standards because existing ambient water quality does not meet standards, the governing board or the department shall consider mitigation measures proposed by or acceptable to the applicant that **cause net improvement of the water quality in the receiving body of water** for those parameters which do not meet standards.

# WHAT IS “NET IMPROVEMENT”?

## Verified impaired water body

- DEP/WMDs require one pound less loading of the pollutant(s) causing impairment after development
- Recommend at least 10% reduction in post-development loading to meet statutory intent.

## Impaired water body with adopted TMDL

- **POST-DEVELOPMENT LOAD < PRE-DEVELOPMENT LOAD – WLA % REDUCTION**

# NET IMPROVEMENT = VERY HIGH LEVEL OF STORMWATER TREATMENT

- Typical wet ponds get 35% TN, 55% TP removal
- Net Improvement can require as much as 90% removal to meet TMDL (26% WLA)
- Need to use combination of structural and nonstructural pollution prevention BMPs including Low Impact Development BMPs

# POLLUTANT LOAD = (CONCENTRATION) \* (VOLUME)

## Stormwater volume factors:

- Rainfall variables include when, where, how long, how intense, time between storms
- Natural stormwater variables include soils, geology, SHWT, topography, vegetation
- Human stormwater variables include land use, site design, soil compaction, percent imperviousness, % DCIA

**Table 9-5** Runoff curve numbers for urban areas <sup>1/</sup>

# HOW DO WE REDUCE STORMWATER LOADING?

- **Reduce stormwater pollutant concentrations**
- **Reduce stormwater volume**
  
- **Better site design – integrate stormwater into site**
- **Minimize imperviousness, especially DCIA**
- **Reduce pollutants using source controls including public education**
- **BMP Treatment Train with nonstructural and structural stormwater BMPs**

# WHAT IS LOW IMPACT DEVELOPMENT?

- **Comprehensive watershed approach**
- **Hydrology is integrating framework**
- **Maintain predevelopment volume and hydrology**
- **Combine nonstructural pollution prevention BMPs with structural BMPs**
- **Control stormwater at the source**
- **Create multifunctional landscape and infrastructure**

**Pollution and Hydrologic Prevention**

# WHAT LOW IMPACT DEVELOPMENT IS NOT

**LID is NOT a silver bullet solution to all stormwater problems**

- Additional nonstructural and structural tools in the BMP tool box
- Infiltration BMPs don't work throughout Florida

**LID is NOT a new idea**

- “Designing with Nature” 1969 book by Ian McHarg
- FL SW program always has promoted retention BMPs

# WHY LID? ADDED BMPS IN YOUR TOOL BOX

- Promote development and redevelopment through greater flexibility
- Build local economy and promote “urban regeneration”
- Get higher levels of stormwater treatment
- Keep loads out of MS4
- Protect local taxpayers and water bodies

- Pervious Pavement
  - Concrete
  - Pavers
- Rain Gardens / Bio Swales
- Street Infiltration Basins
- Bio Filtration Planter Boxes
- Green Gutters

**City of Palmetto**  
**Urban regeneration project**

# **LOW IMPACT DEVELOPMENT PRINCIPLES TO REDUCE STORMWATER VOLUME/LOADS**

- **Consider stormwater as a resource**
- **Protect/avoid sensitive areas**
- **Minimize disturbed areas / soil compaction**
- **Minimize loss of vegetation and trees**
- **Plant more trees – intercept rainfall**
- **Maximize infiltration/stormwater harvesting**
- **Minimize imperviousness, especially DCIA**
- **Integrate stormwater BMPs into landscaping**
- **Cluster development**
- **Use innovative planning tools (TDR)**

# **SOURCE CONTROLS FOR POLLUTION PREVENTION**

- **Minimize clearing, removal of trees, vegetation**
- **Include urban reforestation**
- **Minimize imperviousness, esp. DCIA**
  - **Minimize soil compaction**
  - **Narrow streets, pervious parking, recessed tree islands**
  - **Greenroof/cistern systems for large roofs**
  - **Roof runoff to cisterns, pervious areas**
- **Minimize pollutants**
  - **Florida-friendly landscaping design**
  - **Florida-friendly fertilizers**
  - **Proper use of reclaimed water**
  - **Pet waste pick up and disposal**

# LAND CLEARING, VEGETATION REMOVAL AND SOIL COMPACTION

**80% compaction on first pass of equipment**

# SOIL COMPACTION AND INFILTRATION RATES

| SOIL TYPE                   | INFILTRATION RATE (in/hr) |           |
|-----------------------------|---------------------------|-----------|
|                             | Pitt et. al.              | Gregory   |
| Sandy soils                 | 13.0                      | 14.8 – 25 |
| Compacted sandy soils       | 1.4                       | 0.3 - 6.9 |
| Clay soils                  | 9.8                       | NA        |
| Compacted or wet clay soils | 0.2                       | NA        |

Source: Pitt, Chen, and Clark, 2001; Gregory et. Al, 2006

# THE STORMWATER BENEFITS OF TREES

**PLANTING TREES IN URBAN AREAS INTERCEPTS AND EVAPORATES RAIN AND REDUCES STORMWATER VOLUME AND LOADS**

**Interceptor Tree BMP  
Up to 15% reduction in  
stormwater volume**

**NEED MORE DATA  
AND SITES!**

# TREES ARE STORMWATER BMPs!

## What is i-Tree?

i-Tree is a state-of-the-art, peer-reviewed software suite from the USDA Forest Service that provides urban forestry analysis and benefits assessment tools. The i-Tree Tools help communities of all sizes to strengthen their urban forest management and advocacy efforts by quantifying the structure of community trees and the environmental services that trees provide.

Since the initial release of the i-Tree Tools in August 2006, numerous communities, non-profit organizations, consultants, volunteers and students have used i-Tree to report on individual trees, parcels, neighborhoods, cities, and even entire states. By understanding the local, tangible ecosystem services that trees provide, i-Tree users can link urban forest management activities with environmental quality and community livability. Whether your interest is a single tree or an entire forest, i-Tree provides baseline data that you can use to demonstrate value and set priorities for more effective decision-making.

i-Tree Tools are in the public domain and are freely accessible. We invite you to explore this site to learn more about how i-Tree can make a difference in your community.

Agriculture land use (pasture) - No DCIA, CN for D soils = 89

C = .249

SF residential land use

¼ acre lots -

DCIA = 40%, CN for lawns, D soils = 84 C =.431

# REDUCING PARKING LOT IMPERVIOUSNESS AND DCIA

# RECESSED ROAD MEDIANS AS BMPs

# DISCONNECTING DIRECTLY CONNECTED IMPERVIOUS AREAS (DCIA)

# LID BMP = POROUS PAVEMENTS

- Pervious Concrete
- Flexi-pave™
- Permeable Concrete Pavements
- Pervious Asphalt
- Others

# PERVIOUS PAVEMENT

Good design is important, but --- You have to locate it properly, build it right and you have to maintain it.

# **PERMEABLE PAVEMENT DESIGN REQUIREMENTS**

- **Is the site appropriate?**
- **SHWT at least 2' below bottom**
- **Treatment volume using retention curves**
- **Design per specs/perc rate – min 2"/hr**
- **Compaction – max 92-95% to min of 24 inches**
- **Master certified contractor**
- **Quarterly to annual vacuum sweeping**
- **ERIK testing and recertification**
- **Signage to keep muddy vehicles off**

# EMBEDDED RING INFILTROMETER KIT (ERIK)

A single ring ERIK infiltrometer is acceptable provided that is embedded into the subsoil as shown in Figure 42.

For more information on this in-situ infiltration monitor (ERIK), refer to the UCF research paper entitled "*Construction and Maintenance Assessment of Pervious Concrete Pavements - Final Draft*", dated January, 2007, available at: [http://stormwater.ucf.edu/research\\_publications.asp](http://stormwater.ucf.edu/research_publications.asp)

# A Guide to Florida-Friendly Landscaping

## FLORIDA-FRIENDLY LANDSCAPING PRINCIPLES

1. Right plant, right place
2. Water efficiently, use stormwater
3. Fertilize properly
4. Mulch
5. Attract wildlife
6. Manage yard pests properly
7. Recycle clippings and leaves
8. Reduce runoff
9. Protect the waterfront

## DACS Urban Turf Fertilizer Label Rule

- **Effective July 1, 2009**
- **Only specified fertilizers on turf**
  - **No or low phosphorus (< 0.5%)**
  - **Slow release nitrogen encouraged**
- **Maximum application rates**
  - **0.25 lbs P/1000 sf per application**
  - **0.50 lbs P/1000 sf per year**
  - **0.7 lbs available N/1000 sf**

# PET WASTE: A MAJOR SOURCE OF NUTRIENTS AND BACTERIA POLLUTANTS

- Pets deposit up to 0.5 lbs/day of pet waste
- Contributes to bacterial and nutrient pollution

| Animal     | Average fecal coliform per gram of feces | Fecal coliform load per day |
|------------|--|-----------------------------|
| Human      | 13,000,000                               | 1,921,920,000               |
| <b>Dog</b> | <b>23,000,000</b>                        | <b>7,728,000,000</b>        |
| Cow        | 230,000                                  | 5,358,080,000               |
| Horse      | 12,600                                   | 293,529,600                 |

# IMPROVING WET DETENTION NUTRIENT REMOVAL EFFECTIVENESS

Get 35% TN load reduction and 55% TP load reduction

Can either  
reduce TN/TP  
concentrations  
or reduce  
volume  
discharged

DETENTION  
TIME

TP REMOVAL

TN REMOVAL

$$\text{Eff} = 44.53 + (6.146 \cdot \ln T_d) + (0.145 \cdot (\ln T_d)^2)$$

$$\text{Eff} = (43.75 \cdot T_d) / (4.38 + T_d)$$

# BEEMATs – FLOATING WETLAND MATS

## Turning plants into pollution filters

Phosphorus and nitrogen are essential nutrients for aquatic life. But they're washing into the St. Johns River and other waterways, causing algae blooms and fish kills. The city of Jacksonville is working with Beemats, a private company, to use floating vegetation mats to naturally filter out pollutants.

Source: Staff reports

### THE EXPERIMENT AT TALLEYRAND RETENTION POND

Thirty-five percent of nitrogen and phosphorus is naturally filtered by the pond through biological degradation and surrounding plants. The mats added to this pond should double the filtration rates.

### AERIAL VIEW OF POND

STEPHANIE COPE/The Times-Union

# LID BMP - STORMWATER HARVESTING

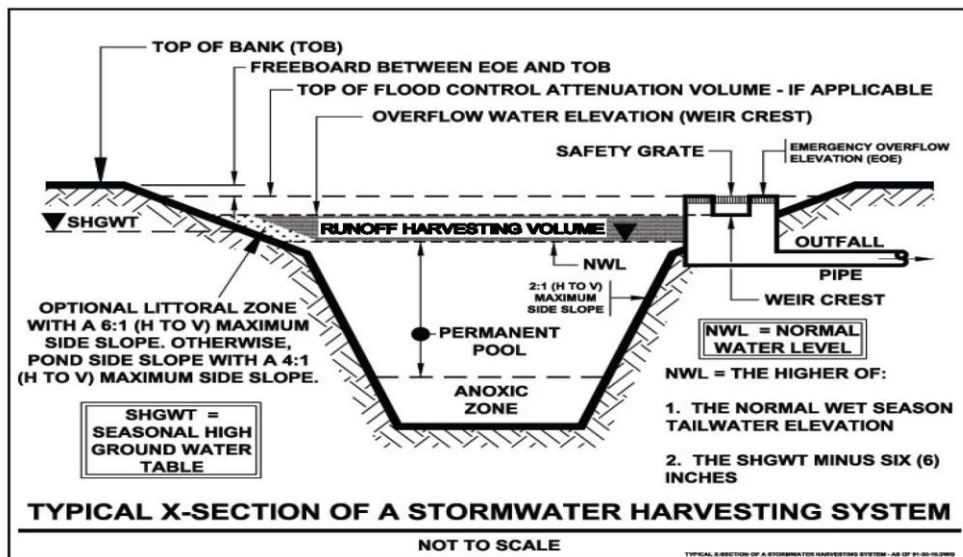

**WHAT?** Using retained or detained stormwater for non-potable uses, such as irrigation, car washing, toilet flushing, wet-land enhancement, etc.

## **WHY?**

- 1. To lower the cost of water supply.**
- 2. Increase BMP effectiveness and reduce stormwater pollution into surface waters.**
- 3. Save and maintain groundwater.**
- 4. Save and enhance vegetation**
- 5. Reduce salt water intrusion.**

# STORMWATER HARVESTING DESIGN CONSIDERATIONS

- Design with REV curves
- Determine  $EIA = C * A$  to get storage volume
- Must be pretreated = horizontal well or equiv
- Over 700 horizontal wells in Florida
- Determine irrigation schedule

# **PROTECTING GROUND WATER IN SPRINGSHEDS WITH RETENTION BMPS**

- Retention BMP load reduction effectiveness based on % of annual RO infiltrated**
- ERP rules assume retention BMPs are 100% effective for surface water discharges**
- Recent monitoring of retention BMPs in springsheds show they are source of Nitrate loading**
- TN is converted into Nitrate, enters ground water**

# HOW MODIFY RETENTION BMPS TO REDUCE NITRATE LOADING TO GROUND WATER

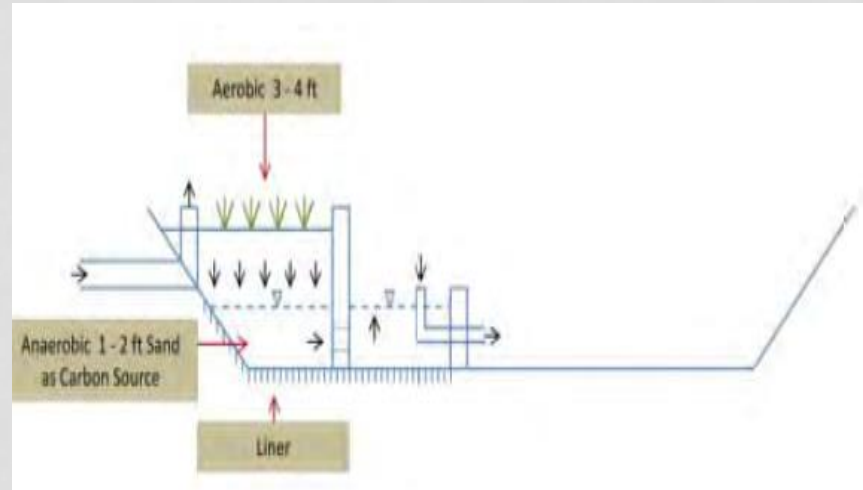

- Soil characteristics are the key

| Hunters Trace (HT) | Parameter                 | South Oak (SO) |
|--------------------|---------------------------|----------------|
| Lower              | Water Table               | Higher         |
| Higher             | Infiltration Rate         | Lower          |
| Lower              | Clay soils                | Higher         |
| Lower              | CEC                       | Higher         |
| Higher             | DO                        | Lower          |
| Lower              | Alkalinity                | Higher         |
| Lower              | Organic Carbon            | Higher         |
| Higher             | Nitrate                   | Lower          |
| No                 | Nitrate Decline with Time | Yes            |

- Need to activate the Nitrogen Cycle – TN – Ammonification – Nitrification – Denitrification
- Add Biosorption Activated Media (BAM) to slow infiltration rate

# BMP TRAINS AND USE OF BIOSORPTION ACTIVATED MEDIA IN RETENTION BMPS

- 1 foot thick BAM layer – reduce NO<sub>x</sub> 60%
- 2 feet = 70%
- Many types of BAM – see 2008 report
- Part of Rain Garden BMP in BMP TRAINS

Final Report: Project #B236

## Alternative Stormwater Sorption Media for the Control of Nutrients

# **HOW TO DESIGN EFFECTIVE STORMWATER BMP TREATMENT TRAINS AND QUANTIFY LOAD REDUCTIONS**

- **Current “presumptive BMP design criteria” do not achieve high level of treatment needed for discharges to impaired water bodies – need LID BMPs**
- **Must be able to quantify the pre-development stormwater loadings**
- **Must be able to quantify the post-development stormwater loadings**
- **Must be able to quantify and demonstrate “net improvement”**

# **BMPTRAINS MODEL**

- **Model developed in cooperation with DEP, WMDs**
- **Model is in the public domain**
- **Model incorporates the latest information relative to designing stormwater treatment systems in Florida:**
  - **Florida annual rainfall by zones**
  - **Statewide Event Mean Concentrations**
  - **Statewide stormwater BMP effectiveness data**
  - **Latest LID BMP effectiveness data**
  - **Stormwater LID BMP design criteria (developed for Statewide Stormwater Rule)**

# **USE OF BMPTRAINS MODEL**

- **Evaluate whether a project is meeting Net Improvement**
- **Evaluate site planning/BMP treatment train options**
- **Evaluate load reduction of BMP treatment train options**
- **Used to evaluate ERP/BMP options for projects in Lee County, Pinellas County**
- **Used to evaluate BMP options for St. Joe Sector Plan in Bay County**
